DVR & CAMERA SYSTEM

J-Tech Highway Safety offers advanced DVR solutions for monitoring and recording the vehicle's work zone surroundings. Our DVR provides locked-down incident recording with an indisputable portrayal of incidents giving you reliable liability protection and a "Safety Opportunity" (near-miss) tool for review.

HELPING YOU MAKE ROADS SAFER WORKPLACES.

J-TECH HIGHWAY SAFETY

DVR & CAMERA SYSTEM

J-Tech's DVR (Digital Video Recorder) System provides you with an accurate, locked-down recording of events in and around your work vehicles. Indisputable recordings protect you from liability claims and provide a means to analyze incidents and apply those lessons learned to new safety procedures.

MONITOR. RECORD. ANALYZE.

J-Tech's DVR system is controlled by a solid-state base unit featuring constant recording with a configurable incident trigger. The dash mounted 7" monitor has a touch screen which can be used to select single or multiple camera views. When the reverse gear is engaged, the monitor automatically switches to rear view to ensure safe backing. A high-view camera is mounted on the arrow board facing forward into the bed of the truck. Up to four additional cameras are available for even greater 360º visibility.

STANDARD FEATURES

- Solid state control unit mounted in tamperproof steel lock box
- 7" dash-mounted touch screen
- 1080p 5-channel hard drive, industrial SD cards (Total 512GB capacity)
